Staff

- **Water Department**

- Mike Maine, Ron Wanner, Jeff Gosser, Kevin Nagel

- **Sewer Department**

- Tony Biamont, Tom Hecox, Brian Lawson, Kyle Mergel, George Whitlock, Dave Patch, Matt Miller

- **Street Department**

- Jeremy Strimple, Matt Long, Steven Keever, Nate Kerwin, Darlene Pederson Brown, Sam Whisler

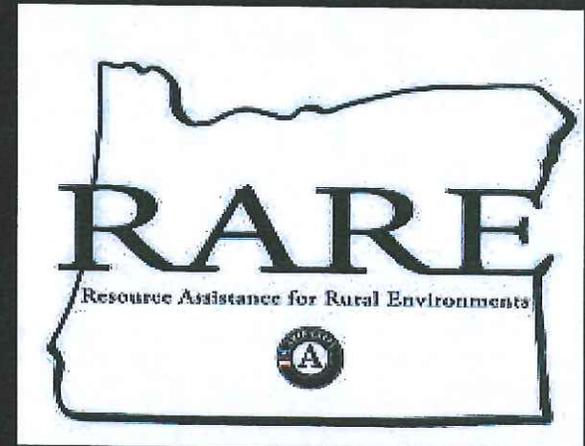

- **Engineering**

- Geoff Liljenwall, Alvin Harwood

- **Fleet Maintenance**

- Terry Bush

- Christian Montbriand
- Parks Master Plan
- Transportation Advisory Commission (TSP)
- Safety Fair
- Walk & Bike Memorial Monuments Tri-fold Brochure
- Walk & Bike Seaside Parks Tri-fold Brochure
- Downtown Parking Master Plan

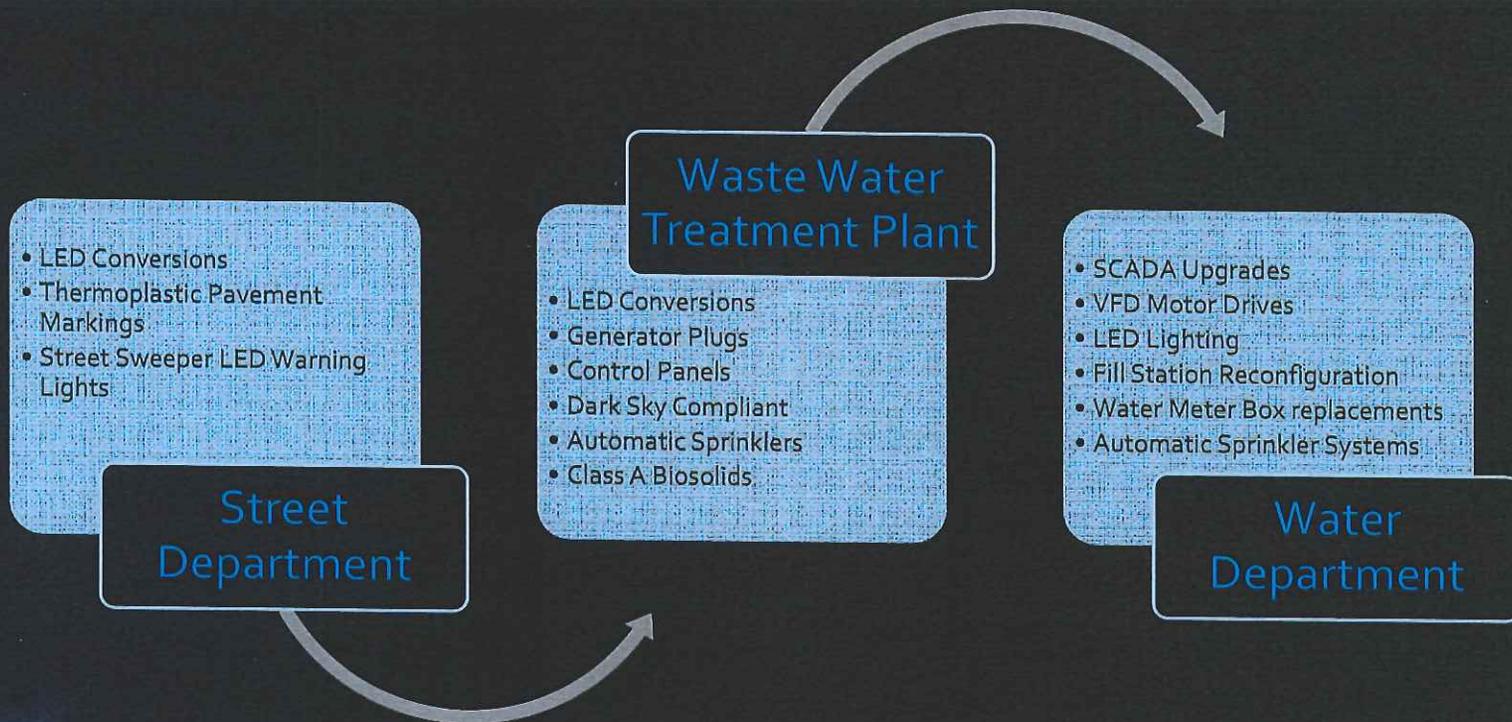

Public Works serves on the following Commission's and Committee's

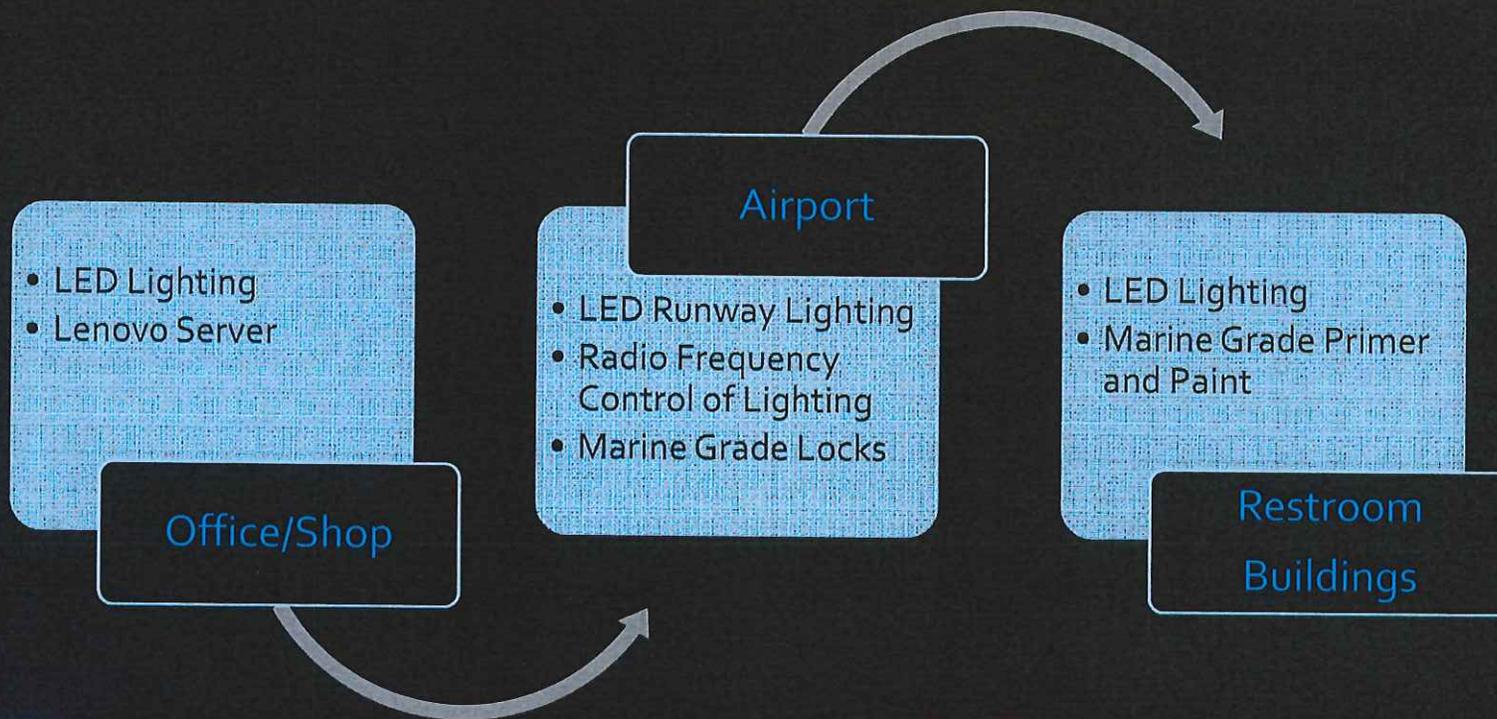

- Transportation Advisory Commission
- City Tree Board
- Airport Committee
- Parks Advisory Committee
- Improvement Commission as needed
- SDDA Transportation Committee

Seaside Public Works – 2016

A year of Technology upgrades

Seaside Public Works – 2016 Technology continues

Oregon Energy Trust

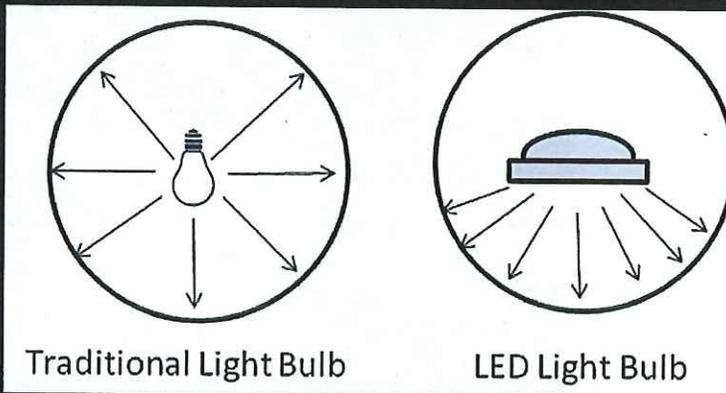

LED LIGHTING REDUCES CO₂ EMISSIONS
50,000 TO 70,000 HOUR LIFESPAN
DARK SKY COMPLIANT – ORDINANCE 2013-05
LABOR REDUCTION
EASE OF DISPOSAL

WHAT DOES "FUTURE-PROOFING" OF LED PRODUCTS MEAN?

LED TECHNOLOGY IS CONSTANTLY CHANGING. RAPID INNOVATION CONTINUES TO IMPROVE THE PERFORMANCE OF LED ON AN ALMOST DAILY BASIS. FUTURE-PROOFING OF LED MODULES ALLOWS LUMINAIRE MANUFACTURERS TO SWITCH FROM ONE GENERATION TO THE NEXT IMPROVED GENERATION WITHOUT MAJOR RETOOLING OR CHANGES IN LUMINAIRE DESIGN, OFFERING BACKWARD COMPATIBILITY WITH DRIVERS.

Lighting

DARK SKY COMPLIANT

LABOR REDUCTION

- Typical incandescent **bulbs** last 1,000 to 2,000 hours. But when speaking about replacement **LED, lamp life** is routinely quoted as 50,000 to 70,000 hours. Long **lamp life**, and the reduced power used to create the same amount of light, is what makes this technology so important.

Public Works COMPUTER SERVER Upgrade (2008)

High Performance

Massive Storage (Scanning Blueprints)

Remote Access

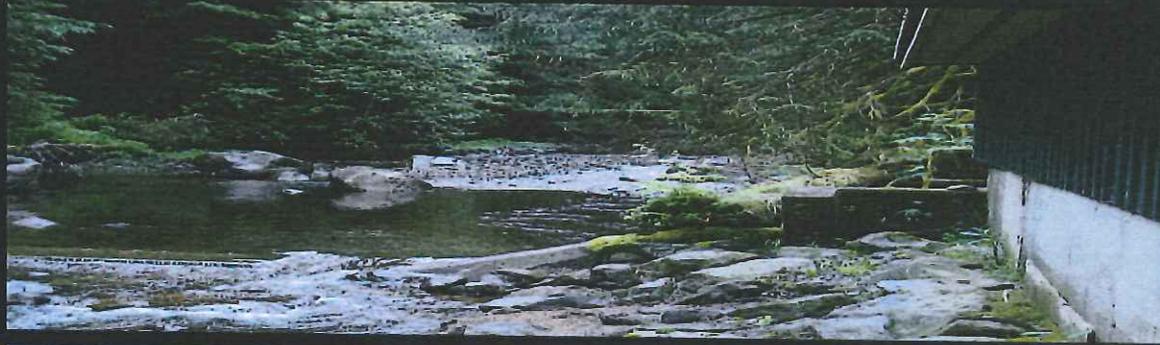

Energy Star Compliant

Water Department

- Headworks
- 50 million gallon Lake Reservoir
- Treatment Plant Treated an estimated 600,000,000 gallons this year
- 43.4 miles of Pipe
- Storage Tanks – Royal View and Peterson Point
- 7 Pump Stations – 2 have new Metal Roofs
- Average Daily Use 1.8 Million Gallons – Peak Daily Use 3.3 Million Gallons
- Cross Contamination (Backflow Device) Program

iPhone Controlled
On-site Generator
Multiple road access points

Wastewater Treatment Plant

Sewage Processed 2016 = 4.645 Million Gallons

Influent Flows through the Plant = 606.37 Million Gallons (1.66 Million Gallons Avg/day)

I & I estimated at 204.87 Million Gallons

39 Miles of Pipeline and over 600 Manholes

25 Sewage Pump Stations

Reconstruction of Exhaust Venting Filter System

Class A Biosolids

Class A Biosolids is a designation for dewatered and heated sewage sludge that meets U.S. EPA guidelines for land application with no restrictions.

Thus, **class A biosolids** can be legally used as fertilizer on farms, vegetable gardens, and can be sold to home gardeners as compost or fertilizer.

Seaside Public Works April 10 – 13, 2017

2017 Spring Chapter Conference APWA PUBLIC WORKS...MAKING A DIFFERENCE

Conference Keynote Speakers

Tuesday, April 11th

The Keynote Address for the Opening Luncheon will be presented by Captain Bill Fugate, the Chief Information Officer for the Oregon State Police. Captain Fugate will share his experience as a seasoned law enforcement officer with respect to effectively communicating with the public and the media utilizing a variety of tools and techniques.

Wednesday, April 12th, "Are You Ready for the Unexpected: Manzanita's Story"

Dan Weitzel, Manzanita Public Works Director, will provide Wednesday's keynote address. He will give a first-hand encounter of the tornado that tore through the middle of Manzanita on Friday October 14, 2016; destroying between two to three hundred trees and damaging over 200 homes. Dan will discuss the response to the event and the process of recovery and cleanup. He will address the extraordinary efforts from many entities, the financial impact of those efforts, how those efforts went well, and what has been learned for the future. You won't want to miss this riveting keynote address on a local community's triumph after Mother Nature!

Seaside Wastewater Treatment Plant Technical Tour

Join your peers for a tour of the Seaside Wastewater Treatment Plant as you learn about the plant's history and development. The Wastewater Treatment Plant has evolved over the last few years from hauling in tanker trucks that applied raw sludge to forest lands, to applying lime stabilized sludge to the city's 80 acre pastureland, to hauling liquid lime stabilized sludge to Arlington, Oregon's landfill. The City purchased a refurbished Fenton Fenton Dryer and a refurbished Sludge Belt Press in 2012, installed both units in tandem at the new shop building and submitted a Biosolids Plan to DEQ for approval of a Class A Product. Located alongside the Necanicum River Estuary, the Belt Press and Fenton Dryer working together have greatly extended the life of the Wastewater Treatment Plant operation and have reduced our treatment costs substantially.

Two tour opportunities will be available (limited to the first 20 registered for each) on Tuesday, April 11, 2017:

Tour Group 1:

Depart from the Convention Center at 8:00 a.m. and return by 9:15 a.m.

Tour Group 2:

Depart from the Convention Center at 9:30 a.m. and return by 10:45 a.m.

Transportation will be provided; space is limited to 20 people per tour so don't delay...register for the tour today!

Pre-Conference Workshop

Monday, April 10th

Calculating Total Cost of Ownership for Civil Infrastructure Assets

The pre-conference workshop will be presented by Josh Proudfoot on Monday from 1:00-4:30 pm. This special session will cover how to bridge the divide between Capital Projects and Operations and Maintenance and help elected officials allocate our resources wisely. Why is maintenance and operations in a perpetual cycle of unfunded service expectations? Why do political decision-makers approve less expensive project development when it causes more expensive operations? Most of the time the answer is that the total cost of ownership is not visible to the decision makers. This ½ day workshop will help you understand how to calculate total cost of ownership (TCO) (commonly referred to as "life-cycle cost"), where you go for the data to support that calculation, and how to present the information at the right time in the right way. We will discuss both the problem, as well as practice calculating the TCO. This workshop is designed for any public works professional that needs to bring better information to the decision makers and public stakeholders.
